

Updated Relational Schema:

Albums(albumID (primary), albumTitle, date\_created, date\_modified)

Associations(albumID, photoID)

Pictures(photoID (primary), photoSource, caption)

Associations was added to make the link between albums and pictures, and required less modifications

Yeah, I cheesed out with the searching of albums :(, I set up some code in the albums page, but

I need to get the value in that URL to work my magic... I'm guessing I have to use

jQuery huh...

The adding of albums was easy once I learned how to upload Pictures!

Any suggestions when you test my code would be nice!

If not then ~\\_(\ツ)\\_/~
